

# Mgr. MARTIN RUSINKO

I am a student of Medical Faculty in 6th year of studies and also a graduate from the Faculty of Science. In the course of my future career I have an objective to combine a clinical practice with research activities therefore I am looking for a position in a hospital that favours an exploration in the medical field. Thus, I would like to apply for doctoral studies after an achievement of fundamental clinical experience and procedural skills. People I meet usually consider me to be patient, empathic, and communicative person. Some time ago during my studies I took a special interest in palliative medicine and its ongoing development. Within my career, I would like to handle the practice of palliation and incorporate it into complex health care along with the broad spectrum of curative methods.
