Prague, February 2nd, 2021

To Whom it May Concern,

I would like to give my highest recommendation and support to **Martin Palkovsky**, 6th year medical student of the Second Faculty of Medicine, Charles University in Prague for Doctoral programme at your institution.

Martin is a very clever/intelligent and ambitious individual. He supplies good results during his studies, while at practise in the Faculty Hospital Motol, he works with precision and carefulness. Always he tries to peep into a complicated problem and to solve it. He reacts to every impulse briskly.

As Martin is a final year medical student his expected date of graduation is July 2021. He has shown to be very interested, motivated and hard-working, which resulted in his overall exceptional achievements.

Martin's interests also include research activities, especially that of Childhood Leukaemia Investigation in Prague centre (CLIP) where he focused on reconstitution of immune system in leukaemia patients post-rituximab treatment.

He meets all requirements for Doctoral programme and I believe he will surely fit in and become a valuable member of your research group.

With regards,

Ass.Prof.Květa Bláhová, Ph.D., Dpt. of Paediatrics, Vice Dean for Education of Clinical Subjects
