Komise / Zákaznická reference:

Podrobný popis výše uvedeného názvu lana nebo složení, jakož i informace o skladování, manipulaci a údržbě lana mohou být nalezeny v normě DIN EN 12385 část 1-3.

Tato dodávka splňuje technické požadavky dodávky dle DIN EN 12385 1-5 / DIN EN 10264 / ISO 4344 / ISO 4101 / ISO 3178 / BS 302 / ISO 2232 / ASTM A 1007-2000

My, Gustav Wolf prohlašujeme, že výše uvedené strojní zařízení splňuje všechny příslušné požadavky evropské směrnice 2006/42 / EG.

Tímto také osvědčujeme, že popsaný materiál byl testován a odpovídá slmuvním podmínkám objednávky, stejně tak jako zákazníkem dohodnutým technickým dodacím podmínkám.

Toto prohlášení pozbývá platnosti, pokud je produkt změněn bez konzultace s výrobcem, a v případě nedodržení upozornění normy EN 12385-3 "ocelová lana - Bezpečnost - Část 3: Informace pro používání a údržbu", jakož i ISO 4309 "Jeřáby - drátěná lana - Péče, údržba, montáž, zkoušky a vyřazení.

Informace o normách se vždy vztahují k poslednímu platnému znění.

Prohlašujeme, že informace uvedené v tomto osvědčení jsou pravdivé a správné.

**GUSTAV WOLF**

### Certificate concerning the examination of conformity

Certificate No.: CA 298

**Certification Body** TÜV SÜD Industrie Service GmbH

Zertifizierungsstelle für Produkte der Fördertechnik of the Notified Body:

Westendstr. 199

80686 München - Germany

Gustav Wolf GmbH Certificate Holder:

Sundernstr. 40

33332 Gütersloh - Germany

Manufacturer of the Test Sample:

(Manufacturer of Serial Production -

see Enclosure)

Gustav Wolf Drahtseilwerk GmbH

Sundernstr. 40

33332 Gütersloh - Germany

Rope drive, for use as part of the machine for **Product:** 

traction drive lifts resp. indirect acting hydraulic lifts

with and without reduced number of travels

PAWO 819W and PAWO F7S Type:

Nominal diameter  $d_{Nom} = 6.0 \text{ mm} - 10.0 \text{ mm}$ 

Directive: 2014/33/EU

Basis of examination: EN 81-20:2014

EN 81-50:2014

**Test Report:** CA 298 of 2016-05-20

Outcome: The equipment fulfills the requirements of the test

> specifications for the respective scope of application stated in the annex of this certificate, keeping the

> > enill cation &

mentioned conditions.

Date of issue: 2016-06-27

Date of validity: until 2021-06-26

Achim Janocha

Certification Body "lifts and cranes"

## Annex to the certificate concerning the examination of conformity No. CA 298 of 2016-06-27

#### 1 Scope of application

1.1 Traction drive lifts and indirect acting hydraulic lifts, falling within the scope of validity of the Directive 2014/33/EU (Lifts Directive) or whose rope drive / drive according to EN 81-20:2014 (D), Number 5.9.2.1.1 a) resp. Number 5.9.3.1.1 b) will be renewed.

According the following definitions:

Traction drive lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D)

Traction drive lifts

Rope safety factor (S<sub>f</sub>) calculated according to without reduced number of trips

EN 81-50:2014, Number 5.12 or equally good

Traction drive lifts Rope safety factor (S<sub>f</sub>) determined deviating from

with reduced number of trips EN 81-50:2014, Number 5.12

Indirect acting hydraulic lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D)

Indirect acting hydraulic lifts without reduced number of trips

Predicted number of trips ≥ 600.000

Indirect acting hydraulic lifts with reduced number of trips

Predicted number of trips < 600.000

#### 1.2 Technical Data

Steel wire ropes of type PAWO 819W and PAWO F 7S

Rope type		<b>PAWO 819W</b>	PAWO F 7S		
Nominal diameter of the rope	d <sub>Nom</sub>	6 – 10 mm <sup>1)</sup>			
Minimum breaking load	F <sub>min</sub>	25,9 kN – 70,3 kN	24,6 kN - 69,5 kN		
construction / type		8x19W + IWRC			
Tensile strength of the wire	R <sub>0</sub>	1570 N/mm² 1770 N/mm²			
Minimum diameter 2)	D <sub>Tmin</sub>	≥ 120 mm			
	D <sub>T</sub> /d <sub>Nom</sub>	≥ 18.46			
V-angle in case of V-groove		γ≥3	35°		
U-angle in case of semi-circula undercut groove (U-groove)	r	β ≤ 105°			
Minimum diameter 2)	D <sub>Umin</sub>	≥ 120 mm			
Du/d <sub>Nom</sub>		≥ 18.46			
	Minimum breaking load  construction / type  Tensile strength of the wire  Minimum diameter 2)  V-angle in case of V-groove  U-angle in case of semi-circula undercut groove (U-groove)	Nominal diameter of the rope d <sub>Nom</sub> Minimum breaking load F <sub>min</sub> construction / type  Tensile strength of the wire Ro  Minimum diameter <sup>2)</sup> D <sub>Tmin</sub> D <sub>T</sub> /d <sub>Nom</sub> V-angle in case of V-groove  U-angle in case of semi-circular undercut groove (U-groove)  Minimum diameter <sup>2)</sup> D <sub>Umin</sub>	Nominal diameter of the rope       d <sub>Nom</sub> 6 − 10         Minimum breaking load       F <sub>min</sub> 25,9 kN − 70,3 kN         construction / type       8x19W +         Tensile strength of the wire       R₀       1570 N         Minimum diameter $^{2}$ )       D <sub>Tmin</sub> ≥ 120         D <sub>T</sub> /d <sub>Nom</sub> ≥ 18         V-angle in case of V-groove $\gamma$ ≥ 3         U-angle in case of semi-circular undercut groove (U-groove)       D <sub>Umin</sub> ≥ 120         Minimum diameter $^{2}$ )       D <sub>Umin</sub> ≥ 120

### Annex to the certificate concerning the examination of conformity No. CA 298 of 2016-06-27

#### 2 Conditions

- 2.1 For the determination of the minimum rope-safety-factor in case of lift installations with reduced number of trips, the document "Determining number of trips, Edition 02", dated 2016-02-01, with certification stamp of 2016-05-20, must be enclosed to the certificate concerning the examination of conformity no. CA 298 and its annex as support.
- 2.2 Conditions for traction lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D)
- 2.2.1 The intended use of the lift installation must be coordinated between the rope manufacturer, the manufacturer of the lift and the person who makes the purchasing order (in case of new lifts) or operator (in case of modifications of the lift).

Especially a statement must be given with regard to the following points:

- The intended use of the lift
- The expected yearly number of trips
- The expected number of trips up to the moment when having reached the limit at which the steel wire ropes have to be discarded.
- The rope safety factor which is required with respect to the lift installation

These statements and the calculations based on the statements must be documented and must be enclosed to the technical documents.

See number 3.3 of this certificate.

- 2.2.2 The rope safety factor must be determined
  - In case of traction drive lifts <u>without</u> reduced number of trips According to EN 81-50:2014, Number 5.12 or equally good

or

- In case of traction drive lifts <u>with</u> reduced number of trips
   Corresponding to "Determining number of trips, Edition 02", dated 2016-02-01 with certification stamp of 2016-05-20.
- 2.2.3 The rope safety factor must be at least  $S_f = 12$ .
- 2.2.4 In case of lift installations with reduced number of trips, the trips must be registered by a safe and reliable automatic counter device (e. g. by a power-fail proof, non-resettable electric counter).

When the number of trips after which the ropes have to be discarded is reached, the lift must be safely stopped in the next landing by the control system and the suspension ropes must be replaced.

See number 3.3 and 3.4 of this certificate.

- 2.2.5 The suspension ropes must be discarded in case of (for all lift installations)
  - 26 broken wires within a length of 30 x d or
  - 13 broken wires within a length of 6 x d or
  - a diameter reduction of more than 6% related to the nominal rope diameter

and (for lift installations with a reduced number of trips)

- When reaching the maximum number of trips which has been determined by calculation.
- 2.2.6 The rope traction of the suspension ropes must be calculated according to EN EN 81-50:2014, Number 5.11 or equal.
- 2.2.7 The ratio between the diameter of the traction sheave and the rope diameter must be at least: D<sub>T</sub>/d<sub>Nom</sub> ≥ 18.46
- 2.2.8 The diameter of the traction sheave must be at least  $D_T \ge 120$  mm.

### Annex to the certificate concerning the examination of conformity No. CA 298 of 2016-06-27

- 2.2.9 The traction sheave must be designed with a semi-circular undercut groove (U-angle  $\beta \le 105^\circ$ , hardened or non-hardened) or with a hardened V-groove (V-angle  $\gamma \ge 35^\circ$ ) made of steel or cast iron.
- 2.2.10 The ratio between the diameter of the diverting pulley and rope diameter must be at least: D<sub>II</sub>/d<sub>Nom</sub>≥ 18.46
- 2.2.11 The diameter of the diverting pulley must be at least  $D_U \ge 120$  mm.
- 2.2.12 The diverting pulleys must be designed with a semi-circular groove made of steel or cast iron (hardened or non-hardened) or made of plastics.
- 2.2.13 All additional requirements of EN 81-20:2014 (D) regarding rope drives must be kept, e.g. like:
  - junction of the rope termination (80% of the minimum breaking load)
  - distribution of load of suspension
  - protections at traction sheaves and pulleys (bracket against derailing of the rope, nip quards)
  - visual examination on the traction sheave is guaranteed
- 2.3 Conditions for indirect acting hydraulic lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D)
- 2.3.1 The intended use of the lift installation must be coordinated between the rope manufacturer, the manufacturer of the lift and the person who makes the purchasing order (in case of new lifts) or operator (in case of modifications of the lift).

Especially a statement must be given with regard to the following points:

- The intended use of the lift
- The expected yearly number of trips
- The expected number of trips up to the moment when having reached the limit at which the steel wire ropes have to be discarded.
- The rope safety factor which is required with respect to the lift installation

These statements and the calculations based on the statements must be documented and must be enclosed to the technical documents.

See number 3.3 of this certificate.

- 2.3.2 The rope safety factor must be at least  $S_f = 12$ .
- 2.3.3 In case of lift installations with reduced number of trips reps. with a pulley made of plastic (at the piston), the trips must be registered by a safe and reliable automatic counter device (e. g. by a power-fail proof, non-resettable electric counter).

When the number of trips after which the ropes have to be discarded is reached, the lift must be safely stopped in the next landing by the control system and the suspension ropes must be replaced.

See number 3.3 and 3.4 of this certificate.

- 2.3.4 The suspension ropes must be discarded in case of (for all lift installations)
  - 26 broken wires within a length of 30 x d or
  - 13 broken wires within a length of 6 x d or
  - a diameter reduction of more than 6% related to the nominal rope diameter

and (for lift installations with a reduced number of trips)

- When reaching the maximum number of trips which has been determined by calculation.
- 2.3.5 The ratio between the diameter of the diverting pulleys and rope diameter must be at least: D<sub>U</sub>/d<sub>Nom</sub> ≥ 18.46
- 2.3.6 The diameter of the diverting pulley must be at least  $D_0 \ge 120$  mm.
- 2.3.7 The diverting pulleys must be designed with a semi-circular groove made of steel or cast iron (hardened or non-hardened) or made of plastics.

## Annex to the certificate concerning the examination of conformity No. CA 298 of 2016-06-27

- 2.3.8 All additional requirements of EN81-20:2014 regarding rope drives must be kept, e.g. like:
  - junction of the rope termination (80% of the minimum breaking load)
  - distribution of load of suspension
  - protections at pulleys (bracket against derailing of the rope, nip guards)
  - visual examination on the traction sheave is guaranteed

#### 3 Remarks

- 3.1 A sign with particulars for identification, containing the name of the manufacturer and the type specification must be attached at the product, to be able to check the conformity of the examined product with the series production.
- 3.2 The certificate concerning the examination of conformity may be used only in connection with the pertinent Annex.
- 3.3 The following installations will be regarded as lifts with a reduced number of trips.
- 3.3.1 Traction lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D) with a deviating rope safety factor (smaller than the rope safety factor which is defined in EN 81-50:2014 (D), Number 5.12.

The deviant rope safety factor (smaller than the rope safety factor which is defined in EN 81-50:2014 (D), Number 5.12) is the result of the determined maximum number of trips, after which the steel wire ropes has to be discard.

In the case of a change of the intended use of the lift installation (using the lift more frequently), a improvement of the lift installation may become necessary.

3.3.2 Indirect acting hydraulic lifts according EN 81-20:2014 (D) and EN 81-50:2014 (D) with a determined maximum number of trips of less than 600.000 trips, after which the steel wire ropes has to be discarded.

In the case of a change of the intended use of the lift installation (using the lift more frequently), a improvement of the lift installation may become necessary.

3.4 Each change of direction is regarded as a trip which shall be registered by the automatic counting device.

Re-levelling movements as far as possible should be avoided. Re-levelling movements exceeding the range of  $I/d_{Nom} > 10$  (bending length ratio = bending length / nominal diameter of the rope) – in case of a preceding change of direction – must be evaluated as a trip.

3.5 The following equivalent number of traction sheaves will be taken as basis:

	V-groove with groove angles γ of								
	35°	36°	38°	40°	42°	45°	50°	55°	60°
	18.5	16	12	10	8	6.5	5	3.7	3
N <sub>equiv</sub> (t)	Semi-circular groove with undercut and undercut angles $\beta$ of								
	0°	70°	75°	80°	85°	90°	95°	100°	105°
	1	2.3	2.5	3	3.8	5	6.7	10	15.2

Deviating from EN 81-50:2014 (D), Number 5.12 table 2 some additional V-grooves (V-angle  $\gamma = 55^\circ$  and 60°) and Semi-circular grooves with undercut (U-angle  $\beta = 70^\circ$ ) will be used, the corresponding equivalent number of traction sheaves  $N_{\text{equiv}(t)}$  has been determined by extrapolation.

- 3.6 The test results refer to the test specimen and the corresponding examination of conformity only.
- 3.7 The list of safety components (annex III of Directive 2014/33/EU) doesn't contain rope drives. For that reason no EU-type examination certificate according to annex IV part A (EU-type examination for safety components for lifts) of the Directive 2014/33/EU, can be issued for that.
- 3.8 This certificate is based on the state of the art, which is documented trough the current harmonized standards. Changes resp. extensions of these standards or a further development of the state of the art may make a revision of this report necessary.

## Annex to the certificate concerning the examination of conformity No. CA 298 of 2016-06-27

- 3.9 If new knowledge should occur, the test laboratory reserves the right, to give additional conditions concerning the use of the rope drive, or to modify existing conditions.
- 3.10 The certificate about an examination of conformity number CA 298 can be added to the required reading technical dossier as a help for decision of the notified body.
