Letter of Confirmation

Dear Sir or Madam,

We, Löwenstein Medical GmbH & Co. KG, reputable manufacturer of Anaesthesia workstations, ICU Ventilators, Neonatal Ventilators, Warming Beds and Resuscitation Systems, having factories at Arzbacher Strasse 80, 56130 Bad Ems, GERMANY, herewith confirm that the double membrane of the Leoni Plus HFO is a unique item which is more efficient in comparison to a single membrane.

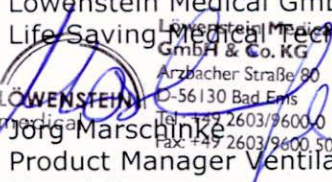

Our double membrane causes a larger compressive volume in the HFO chambers. The double membrane principle is able to realize **sufficient HFO Ventilation** up to a bodyweight of 12 kg. The dimensions of the loudspeakers have the double size at least in comparison to other HFO systems, following the principle of membrane based Oscillation.

The Ventilator intended use is for Neonates and Pediatrics up to 30 kg bodyweight designed. This belongs to all conventional modes, implemented into Leoni plus Ventilator.

We, Löwenstein Medical are generally informing about the performance. The HFO is the only exception in performance of 30 kg BW. HFO is working up to a bodyweight of 12 kg, a clarification, to take care for the proper usage. Clearly announced in Manuals as well as the technical data sheets.

Yours sincerely

Löwenstein Medical GmbH & Co. KG
